

Projet 1: AI Knowledge Copilot

Domain: Knowledge Management System for Customer Service

Industry: Passenger Airline

Prepared by:

Michelle Tran

Role Targeted:

Business Analyst | Product/ System Analyst | Product Owner

Business Analysis & Product Discovery Document

1. Executive Summary

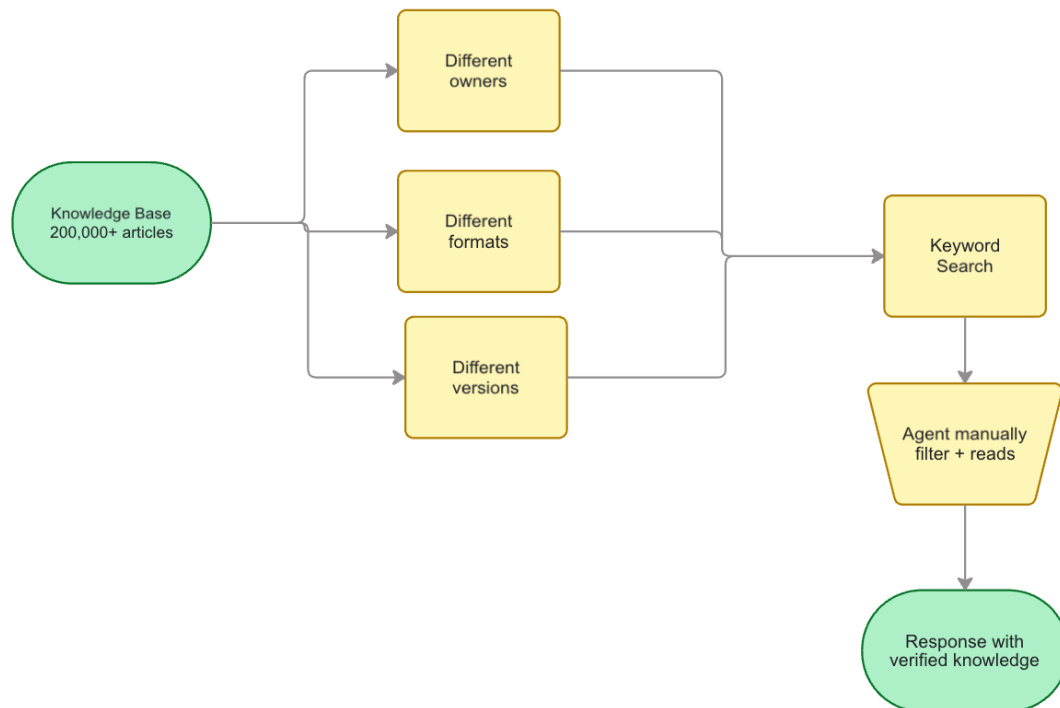

Air France Customer Service relies on more than 200,000 fragmented operational knowledge articles covering all aspects and products.

Customer Service Agents spend approximately 5-8 minutes locating reliable information, leading to increased Average Handling Time (AHT) and inconsistent customer responses.

AI Knowledge Copilot transforms the existing Knowledge Management System from a document repository into an AI-powered decision support platform through *semantic search, Retrieval-Augmented Generation (RAG), knowledge graph navigation and trustworthy source citation.*

Note: This case study is internal project of Air France – KLM, all data details will be not public, only study researches are showed to establish foundation for the conclusion.

2. Business Context

⇒ Pain points

<i>Area</i>	<i>Current situation</i>
Search	Keyword only
Knowledge	Fragmented
Policy	Difficult to verify
Consistency	Low
AHT	High

3. Approach

- Business Discovery: Stakeholder interviews, user shadowing, As-Is / To-Be workflows, pain point analysis
- Knowledge Assessment: Knowledge inventory, taxonomy review, metadata analysis, duplicate & gap analysis
- AI Solution Design: RAG architecture, semantic search, knowledge graph, prompt engineering, citation strategy
- Product Definition: User story mapping, MVP prioritization, backlog creation, roadmap planning
- Validation & Adoption: UAT, AI evaluation, feedback analysis, performance monitoring, continuous improvement

4. Business Objectives

<i>Objective</i>	<i>KPI</i>
Reduce AHT	-20%
Reduce Search Time	< 30 seconds

Increase FCR	+15%
Improve Consistency	>95%

5. Persona

Customer Service Agent

Name

Emma

Responsibility

Provide an appropriate
answer to Customer on
Contact channels
Maintain the excellent
relationship with Customer

Age

30 years old

Desires

Find answer quickly
Answer Customer in
the shortest time

Location

France

Pain

Searching takes forever
Unsure latest policy
Fear giving wrong
answer

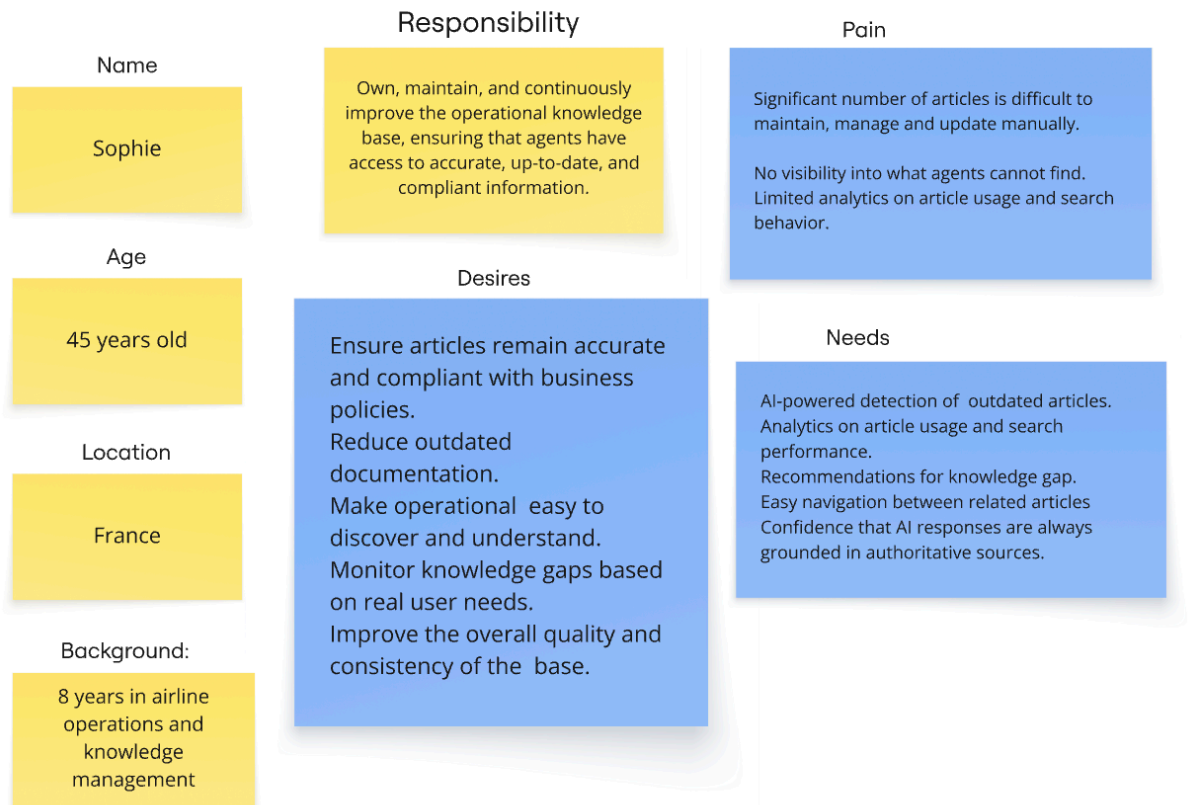

Background:

B2C Sale and
Service
Exp: 1 year

Needs

Trusted AI

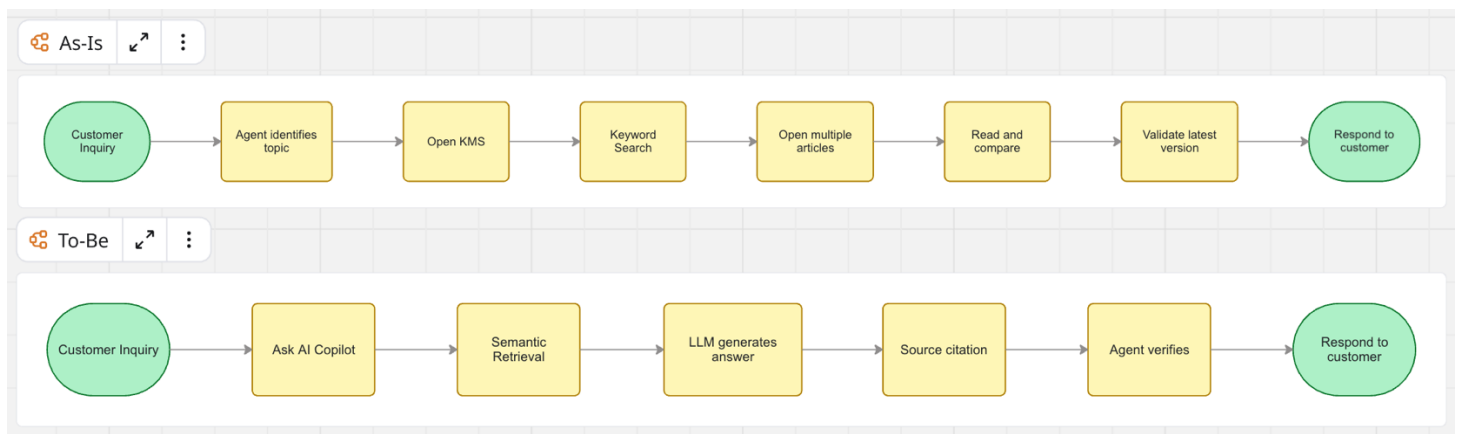

Knowledge Expert

6. Discovery summary

- Methods: Interview, Observation, Survey
- Findings:
 - + Agents often open more than 1 article per case.
 - + Agents check with external sources.
 - + Experienced agents rely on memory instead of KMS.
 - + New agents struggle with inconsistent terminology.
 - + Outdated knowledge articles create confusion.

AS-IS VS TO-BE workflow

7. Risks

Risk	Mitigation
Hallucination	Mandatory citations
Outdated knowledge	Version control & content lifecycle
Low adoption	UX optimization & onboarding
Missing documentation	Feedback-driven knowledge gap detection
Compliance	Human verification for sensitive cases

8. Out of Scope

Feature	Reason
Voice Assistant	Low usage frequency in current workflows
Multi-language Generation	Existing enterprise translation tools satisfy this need
Auto-send Response	Compliance and quality assurance require human validation
Autonomous AI Agent	Human-in-the-loop is mandatory for operational decisions
